

Project Title

Online Study Material Management System

Abstract

We have seen, many students are facing a problem finding/managing study material and previous years' exam papers in a single place. So, for solving this problem Online Study Material System is one of the very efficient and effective ways to provide study material and Previous year question papers on an online platform to help students and maximize benefits. Keeping this in mind, we plan to make a web application for managing and providing Question Papers and Study Materials to the students of the CSE department.

Towards this end, The implementation of this platform is done by using HTML, CSS, JavaScript to create the frontend, PHP for the backend, and MySQL, SQL for Database Management System.

The application will store Question Papers and Study Materials in pdf, docs, ppt, jpeg, and png formats.

The application is flexible, simple, efficient, and user-friendly.
